1. Sunday in Lent Feb. 14
Easter day in Marche 27
Ascensionday in May 1
Whitsunday in May 15
Pentecost Sunday June 27
Between Christmas and Whitsunday is 6. weekes
and 2. dayes.
Between Trinitie & Whitsunday are 26. dayes.

Forraine account.

The Golden number 7
The circle of the sun 21
The sundays letters C 23
The Romane indution 6
The Easte
1. Sunday in Lent Feb.
Easter day April the
Ascensionday May the
Whitsunday June.
Pentecost Sunday June
Between Christmas and Whitsunday is 7. weekes
and 5. dayes.
Between Trinitie & Whitsunday are 25. dayes.

There will be an Eclipse of the Sunne the last day
of Julie, about 3. of the clocke in the afternoon
the Sunne & the moone being in the 17. degree
40. minuts of the sterre Signe Leo, a neare to the Dragon
head. This will be but a small Eclipse, and very little
perceived: wherefore I suppose that it cannot denoue
any great euils, or troubles: also by reason that the
tunat: planet Jupiter obteyneth the guiding, & denouation
th: rof. And therfore I omit farther speech of it
this time.

Here followeth a rule teaching the beginning
and ending of every Term with their
TERMINES.

HILARY Term beginneth the xxiij. of January,
and endeth the x. of February.

This term hath fowre returnes.

Octabis Hillary } Craftino Purifica,
Quind. Hillary. } Otabis Purifica,

Easter Term beginneth the thirteenth day of April,
and endeth the viii. of May.

This term hath fowre returnes.

Quind Paschz. } Mensa } Quinque Paschz.
Tres Paschz } Paschz. } Craftin. Ascension.

Trinitie Term beginneth the seuenth of May, and
endeth the xvith day of June.

This term hath fowre returnes.

Craft. Trinitatis. } Quind. Trinitatis.
Octab. Trinitatis } Tres Trinitatis.

1. Michaelmas Term, beginneth the Tenth of October
and endeth the eighth and twentynight of November.

This term hath eight returnes.

Octob. Michael. } Craft. Annsatum.

Quind. Michael. } Craft. Martin.

Tres Michael. } Craft. Martin.

Mensa Michael. } Quind. Martin.

It is also to be noted that the xij. day of November
doth before the beginning of every termis except Trini-
tie Termis only before Janych. is openeth but fower
days.

THE ANATHOMY OF MANS
bodye, as the partes thereof are governed by the
12 celestiall signes.

Aries the head and face.

Taurus,
Beaſt &
Chote.

Cancer
Beaſt,
Stomach
& lungs.

Virgo
Guts &
belly.

Scorpio
Beetles
and bla-
der.

Capri-
cornus
The
knees.

Gemini
Jewes
& shoul-
ders.

Leo,
Harts
back.

Libra,
Beaſt &
loynnes.

Sagitt-
arius.
Thighs.

Aqua-
rius.
The
feet.

Tanuary hath xxxi dayes.

1 The 1 **S**unne riseth at 8. of the clock, and 3. minutes.
22 **S**etteth at 3. and 58. minutes.

The day is 7 houres long, and 52. min.

The night is 16 houres and 8. min.

Ellis. 1608.

A Prognostication for
the yeare of our redempcion
by Christ, MDCVIII,
Being Leape yeare.

Wherein is contained, after a
plaine, and true manner, the disposition
of the fourte quarters of the yeare, and
the daily alteration of the weather,
in the twelve moneths of
the same.

Gathered, and made according to
the rules of many and divers approued
and expert Authours, as well an-
tient, as of the time
present.

Accomplished with newe additions, and com-
posed into a briefe booke, very commode-
ous, and profitable; with Tables and
Rules thereto annexed, no lesse necessa-
rie, and delighful: as other like mat-
ters apt for sundry occasions, as each

good Christian at his opportu-
nity may conveniently
use the same.

LONDON,
Printed for the Company
of Stationers.

A necessary Rule to know the beginning and ending of euery Term, with their Returns.

Hillary Term beginneth the 23. day of January, (to be not Sunday) and endeth the 15. of February, having four Returns. viz.

{ Octabis Hillarij. } { Craftino Purifica. }
{ Quind. Hillarij. } { Octabis Purifica. }

Easter Term beginneth 17. daies after Easter, and endeth the Monday next after Ascension day, and it hath four Returns, that is to say.

{ Quind. paschz. } { Quin. paschz. } { Quin. paschz. }
{ Tres paschz. } { Mense Paschz. } { Crat. Ascens. }

Trinity Term beginneth the Friday next after Trinity Sunday, and endeth the Thurday fortnight after, having four Returns, that is to say:

{ Craft. Trinitatis. } { Quin. Trinitatis. }
{ Octab. Trinitatis. } { Tres Trinitatis. }

Michaelmas Term beginneth the 9. day of October, and endeth the 28. of November, having 8 Returns, that is to say.

{ Octabis Michael. } { Craft Animarum. }
{ Quin. Michael. } { Craft: Martin. }
{ Tres Michael. } { Octa: Martin. }
{ Menie Michael. } { Quod: Martini. }

Note also that the Eschequer openeth 8. daies before any Term begin, except Trinity Term, in which it openeth but four daies before.

A description of the qualities and
beginnings of the four quarters of
the year. And first, a declaration
of the disposition of Win-
ter season. 10

Winter, the first part of quarter of the year, according to our English account, did take place with us the last year 1607, the 13. day of December, 133. minutes after 3. of the clocke in the after noone: at which time the Sunne having dispached the Dariell quarter, with the last degree of Sagittari: at his first entrance into the first minute of Capricorne: did cause with us the shortest day, and longest night: by reason of the Sunnes greatest declination southward, from our Zenith, at Verticall position, did so minister death untill the 10. day of March next following, that the Sunne entred into Aries.

This season, according to his proper nature, is unmercifully cold and moist, causing abundance of raine, cold and moisture humours to overflow mens bodies.

As concerning the condition of the weather in this quarter, I suppose it will be very cold, with great frosts & snow, and all winterly kinde of tempestuous weather: but chiefly in the former part thereof, as about the latter part of December, 1607, and so continuing for the most part untill the mid of Januarie, in this year 1608. then will it beginne to bee somewhat more temperate, until the latter part of this quarter.

Diseases are the sicknesses, which are like to affect mens bodies this quarter, which will be no lesse violent and deadly, then the season will be untemperate, cold and rainy, bring for the most part of cold & moist humours: as Quartans, Ura, Mephitis, Cancer, yellow choleric, Rhumes, colickition of Uter, blakke Jaundise, waine desire of going to stool, trembling, blakke choleric, Palies, loselness of the belly, long sicknesses, moyses,oughes, the French scabs, the pissing chal,

A Prognostication.

and other like diseases, which for humanity, I put unto it, and pray God to keep them us. Amen.

Of the Spring: with Astrological judgement, briefly declaring the condition of the whole yea^r, 1608.

The Sunne, by his approach from the lower parts of
Zodiack towards these our northely habitacions, do-
getteth by little and little to abandoun the churche
and extremitie of Clinter: and bringeth unto vs the
joyfull and perteless time in all the yeare, commonly call-
the Sping, or second Quarter: but in truthe the first, we
hath euermore his beginning at such time as the Sunne
saketh the last minute of Pisces, which was one of the winter
signes: and euereth the very beginning of the small
Equinoctiall signe Aries, masculine, mouable, diurnal, of
nature of fire, which will fall out to bee this present year
1608. the 10. day of March, just at houre of the clocke in
morning. At which time the artificiall day is equall with
night, for the Sunne then riseth precisely East at 6. in
morning, and setteth west at 6. in the evening. And this
of the yeare continueth vntill the 11. day of June next
following.

Naturally, is this Quarters proper condition hot, or moist, after a temperate manner; and may principally be compared to the Sanguine, or Joviall complexion, and element. Therefore this time is most convenient to deliver or rid any disease, or sickness, which were gotten before: or now is simply the best time of the yeare, either for bleeding, purging, bating, sweating, or using any other phisick meanes. Therefore ye which are sick or diseased, neglect not this so conuenient and comfortable time, if ye desire by a easie recovery of your gridres.

But now as concerning the State of this Revolution, by
a celestial figure described for the time thereto, I finde by
next of place, fortitudes, and celestial Dignities, &c.

shain the judgment of this Country, as also which happen
to him transpiring the precedent by his hourly presence
in calling his mischievous friends to the same, as farr
as both Parts, by a spirit of hostility & ministering
to 11. hours, which is affliction and lamentation, of these
are not impiousness, heresies, and of unkindnes, of their
ill liners, or any likewise being conspicer with them
both by such configurations, and other like signall
make me to conjecture great troublous and annoy
to ensue: chiefly to some men of great estimation and emi
tage; great debauch, strife, contention, and brawles, are like
to happen through their disagreement: yea, many of them
afflicted with impiousness: grecous heresies, and
one of them with death: likewise, great discommodities
and hindrance, of their wealth and dignitie: •@ m
en, and many men of warre shall be tormentes, and impa
tient. Rustans & therns shall increase, and be much bict:
many bereaved in bargaining, as well for landes as for hou
se, also plaine enimie and deadly rancomfullarie among
men, great losse in cattle, especially of the graine; fowles & re
dding by land: thymwackes and prellous: say age by sea, by
cause of overflowings, or floods, violence of tempest, & such
like: many other calamities and miseries are like to happen
which notwithstanding, will be greatly mitigated by the
supernus aspect of the two beneficents, Jupiter and Ceres
with God grant may be to his everlasting glory. Our
loving him of his great mercy, to preserve the King
Queene, and roiall progeny, and to sustaine this Realme in
pece and quietnesse. Amen.

Of Summer.

Summer, being the third part of the year astronomically,
maketh his beginning, when as the Sunne hath fully
witten his course through the three backes of spring signes
Aries, Taurus, and Gemini, and entered the first moneth, by

A Prognostication.

Sample of the signe Cancer: which will be this yeres
day of June next following, at 12. minutes after the
clocke in the afternoon: for then the Sunne is in
the Summer solstice, bringing the Sunne into the
part of the Heavens, having the greatest declination
to the South, from the Equinoctiall, which conserueth
to be in the morning, for Mornaynt, and his setting
Southwest: therefore making with the longest
shortest night in all the yere. And so this summer
untill the 13. day of September, next ensuing, to be
the time of the Sunnes entrance into the second equi-
tall signe Libra.

By quality and naturall inclination, this part of the
yere hots and drie, and that undoubtably, apperteining
and the Firey element: yet for the ripening of such fruit
God hath provided, it is very necessary and convenient.

I conjecture that the disposition of this summer
will be somewhat variable, with thunder, lightning, and
hurte shewers, both about the beginning, & end of June
most part of July: but as for August, and September,
are like to be more temperate: although at times
inconstant, with some sombre shewers, which may
display the prophetis expectation.

The calamities of this yere are like to be hots and
fauers, the Tercian, and Quartian feauer, plague,
thymes, humidise, vicer, red choller, burning disteases
Cun, sharp griesse smadness, soule tetteres in the face, gree-
Corbundes, swelling, Gout, &c.

Of Haruest.

Haruest bring the last quarter of this yere, making
day and night againe of equall length, leuining, as
it is trameed, a second Spring, which Quartier
take place this present yere on Tuesday, the 13. day of Oc-

about, at 45. minutes after two of the clocke, early in the morning, so then the Sunne hath passed through the three Summer signes, and doth enter into the Equinoctiall signe Libra, finishing the Astronomicall yeare.

This season is naturally cold and drye, and differeth altogether from the nature of the Spring: because that was applied to the Ganguine complexion, and beginning of man: so is this Quarter even on the contrary part compared to the Melancholy complexion and last age of man. And as that time was for the most part temperate, & keeping a due equallitie; in like manner is this season untemperate, never keeping any equality of temperature: for as sometimes over hot, and at other times verie colde: wherefore such distemperatures doe make this time of the yeare more apt for sicknes then any other time: which doth divers times breed in mens bodies, great and grievous maladies. So that now ought to be taken great heed and diligence, as well in the order of mans diet, as in the exercise and cloathing of ymselfe. The State of the weather in this Autumn, is like to bee cold and moist, variable, with some raine and snow enter- mingled with blustering windes, very uncertaine.

Howbeit, it is like to be more healthfull then it hath bee in yeeres past. But those diseases which are like to happen, will proceede of heat and drynesse, as was mentioned in the last Quarter, with some other: as Inflammations of the Lungs, Apoplexies, Blisteres, distenes of Blood, Blindnesse, Quincies, winging at the Heart and Stomache, Spasmes, & the Cramps, amartomes, Inflammations of the sin, Headach, pellies of the backhorne, and such as come of Periaptions.

A Prognostication.

¶ The inclination of the weather,
with a description of the Rising and Setting of the Planets, and in what places of the skie they may be seen at Sunne Rising and Setting. Together with Tables, shewing the Risings, comming to the South, and Settings of most of the principall fixed Starres, for the first day of every moneth, throughout the yere of our Lord God, 1608.

Whereby any one, though hee be vnxperit in the Art of Astronomie, and yet is desirous to know the Starres and Planets, may by this meanes ensuing, in cleare night when Starres doe appearre, easilly know, and perceiue them.

Here note, gentle Reader, that at the end of every moneth, I have set downe the rising and settings of all the most notable fixed Starres, with the Planets the same moneth, with the day also in certaine figures there before pre-fixed: wherin I was enforced to vse certaine abridged Characters for breuities sake, which are these following, M. R. a morning rising, E. R. an evening rising, M. S. a morning setting, and E. S. an evening setting: the rest being exposed to vulgar sense.

Januarie.

Ellis. 1608.
Januarie.

Sunrise is hidden
by Gunne beams
till the 20. day.
Capiter, our Eng-
landstarre, shineth
gloriously near the
Earth at Gun set;
Mer, ethere red:
South, & by east
before Gun rising.
Venus is out
bright morning
starre, rising 2.
morn: before 6.
Mercurie is com-
bust to the 13. day,
then appeared
in the morn: be-
fore Gunne rising.

ight, & appeareth though & by cause, at evyn tyme;

Scarne setteth after the Gunne, and cannot be seen.

Ofttimes this smoot: the ayre will be

Iochin'd to Tempests great:
With Thunder, Lightning, hayle, and raine,

And fud'aine cold, and heate.

The first and 2. dayes, hote, windy, and lowmlyng overcall for
dayes, & threatening a Thunderclap: the 3. day, a coniunction
of Saturne with Mars, which may be tyme of tempestuous wea-
ther: the 4. not much differing: the 6. like for some litle raine in
the morning: the 7, 8, and 9. about the like weather as before:
the 10. windes, casting clouder: the 11. day, there is a quadrat
of Saturne & Iupiter, Tempestuously disposed: the 12. and 13.
wetting gales: the 14, 15, and 16. windy, and diversly disposed,
with some shewers, scattering raine, & missellings now & then:
the 17, & 18. blastes arte: the 19. cloudy: the 20, 21, 22. glea-
ning cloues, threatening thunder, & someraines the 23. like to be
hote: specially in the night: the 24. hote & a shewer of rainnes:
the 25. windes and scattering cloues: the 26. faire and windes:
the 27. blasty stirring: the 28, & 29. windes and waues dispersed
under the earth: some shewers: the 30. seasonable: the 31.
very shewers in the morning, and at night hote.

On 1. daye, Algol; 2. & 3. starre Karyng, & 4. Procyon & Alde-

A Prognostication.

the 5, &c. Pleyæ, and the 8, Pro: & the 4, Praef: & Alc: & Al. Procyon, the 9, the 14, Fornah, & the 8, Alkai, the 13, Reg: & the Hyades, the 2, Praef: & Alc: & the 4, M. R. Scor: infor: the 15, Reg: & Aldeb: & the 2, Antar, the 12, Reg: & the 2, Alphæ, the 21, & the Lyra, June.

Saturne, riseth at 47, mi: after 10, in the night.

Jupiter shining like, riseth at 49 mi: after 1. in the mor: is east half an hou. before sun ris: Mars riseth

bloodish, South-
east at 15, mi: after
11, in the night.

Venus, our mor-
ning star, may be
seen East, before Sunne rise. Mercurie riseth 10. mi: after Venus, and may be seen neare her at Sunne rising.

The beginning of this month will prooue,

Indifferent good and faire:

But toward the end, some Stormes will be,

And much dipterred ayre.

The first, 2, and 3, daies some hoppes, the 4, 5, 6, 7, 8, 9, 10, and 11, Thunderlike cloudes scattered in the skie, shedding and stilling showers, with some puffs of wind, the 12, and 13, comfitable ayre, the 14, hotte sunshine, the 15, day, at times sun east, the 16, and 17, not much differing, though more wind the 18, aperit skie for sultie heate, the 19, 20, 21, & 22, blis-
sing cloudes and hote ayre, like to promeke Thunder and
raine, the 23, windie and very like to raine, the 24, raine
and moist, the 25, 26, 27, 28, 29, and 30, blissting dayes.

The 3. daye, & 2 Pleyades, the 4. & 5. Bedeig, the 9. daye, &
Hyades, and the 11 daye, & 2. Aldeb. and 2. Antar, the 16. &
Rigill, the 19. M. R. Aldeb. the 20. & 2. Alhabor, & 2. W.
